SUMMARY

Senior CS student at UC San Diego with a growing focus on machine learning through coursework in AI, deep learning, and computer vision. Currently working full-time as a warehouse associate at Amazon to fund my education while pursuing a long-term goal of becoming a machine learning engineer. Interested in applied ML, model reasoning, and building systems that make ML tools more accessible.

EDUCATION

University of California, San Diego

San Diego, CA

Bachelor of Science in Computer Science

Graduating June 2027

- Relevant Coursework: CSE 150B (Introduction to AI: Search & Reasoning), CSE 151B (Deep Learning), CSE 152A (Computer Vision), CSE 134B (Web Client Languages)

EXPERIENCE

Warehouse Associate

Feb 2022 – Present

Amazon Sub Same-Day (SSD) Delivery Station

San Diego, CA

- Rotate across multiple roles (picking, packing, stowing, staging) based on daily station needs, adapting quickly to shifting priorities in a fast-paced smaller-format fulfillment site
- Maintain performance standards under tight delivery windows while balancing a full-time college course load, developing strong time-management and reliability habits

PROJECTS

Qwen3-4B Math Reasoning | *Python, PyTorch, Kaggle*

2026

- Working to improve mathematical reasoning capabilities of the Qwen3-4B small language model using model-intrinsic methods (prompt engineering, supervised fine-tuning, and reinforcement learning)
- Iteratively evaluating model performance on high-school to graduate-level math benchmarks
- Exploring how techniques like chain-of-thought prompting affect reasoning accuracy in smaller models

Personal Portfolio Site | *HTML5, semantic markup, Netlify*

2026

- Designed and built a semantic HTML-only portfolio site using user-centered design principles (personas, wireframes, site diagrams)
- Deployed via GitHub and Netlify, structured for future progressive enhancement with CSS and JavaScript

TECHNICAL SKILLS

Languages: Python, Java, C/C++, HTML/CSS

Machine Learning: PyTorch, scikit-learn, prompt engineering, supervised fine-tuning, reinforcement learning basics

Developer Tools: Git, GitHub, VS Code, Netlify

Areas of Interest: Deep learning, computer vision, natural language processing, applied ML
